

Drinking Water Independence

SOURCETM

SUNLIGHT + AIR = DRINKING WATER

Drinking Water Quality & Access Is Not Guaranteed

Water Quality

Contamination

Water pollution kills nearly 10,000 people around the world each day.

Microplastics

Over 90% of bottled water brands were found to have been contaminated with microscopic sized bits of plastic

Water-Borne Illness

Every 8 seconds, a child under the age of 5 dies from diseases related to contaminated water

Water Access

Infrastructure

2.1 billion people live without safe drinking water at home

Supply & Demand

We consume our water faster than fresh water sources are replenished

Bottled Water

It's expensive, environmentally damaging, and in a crisis it's the first thing local stores run out of

Relying on existing water infrastructure, a well, or bottled water puts you and your loved ones at risk. 

We provide a better way...

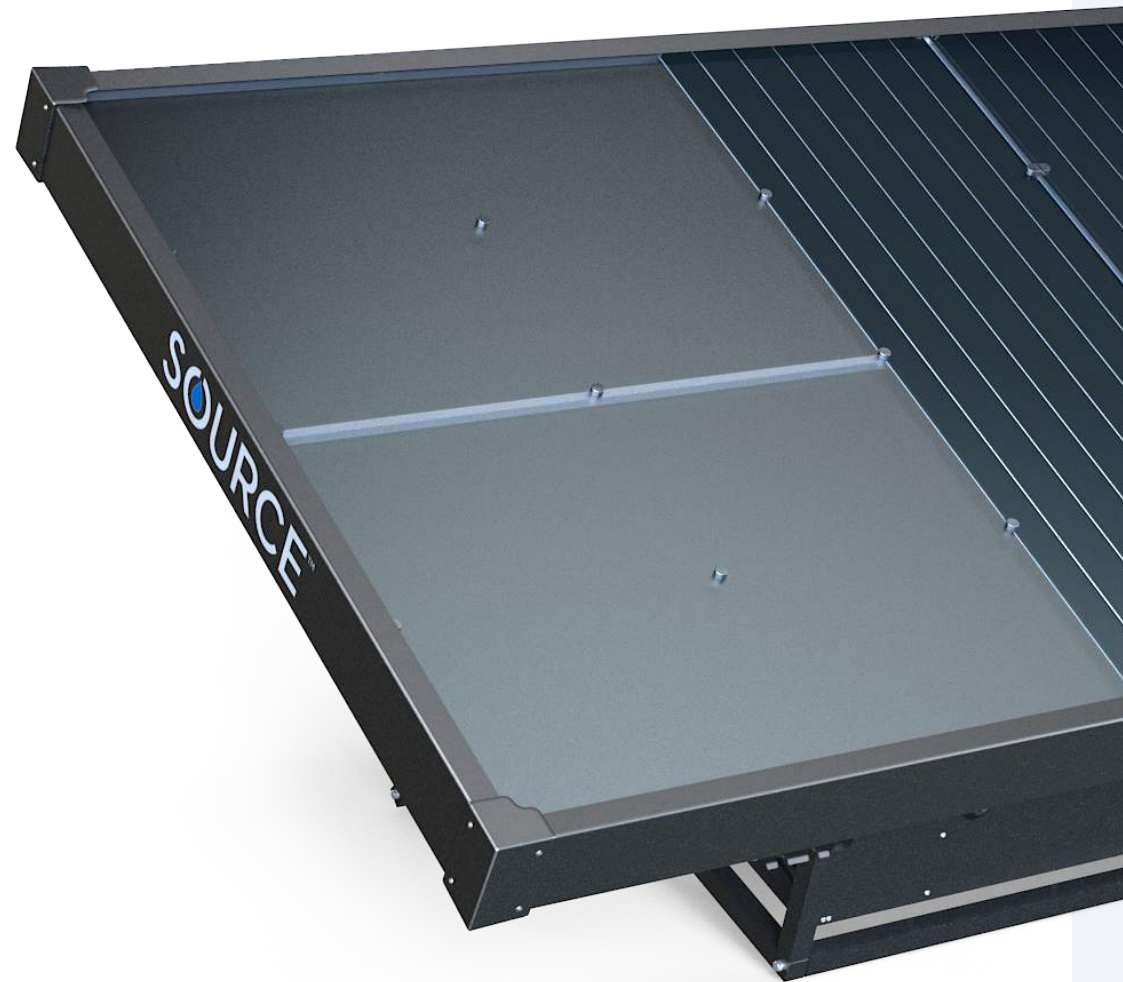

Introducing SOURCE[™]:

A Hydropanel[™] that makes drinking water from sunlight + air

SOURCE allows you to create an independent, low-cost, and renewable supply of drinking water requiring no electrical or external water input.

"Imagine a solar panel that instead of producing electricity it produces drinking water. I recognized immediately that this could be something very interesting, very transformational. I'm pretty sure that I'm the first person to drink a glass of sweet tea made from the air!"

- Mike R., South Carolina

Your Water with SOURCE™

Your water is carefully made and monitored so you know it's perfect to drink.

Your water is independent from any external inputs, so it's never disrupted by infrastructure failures

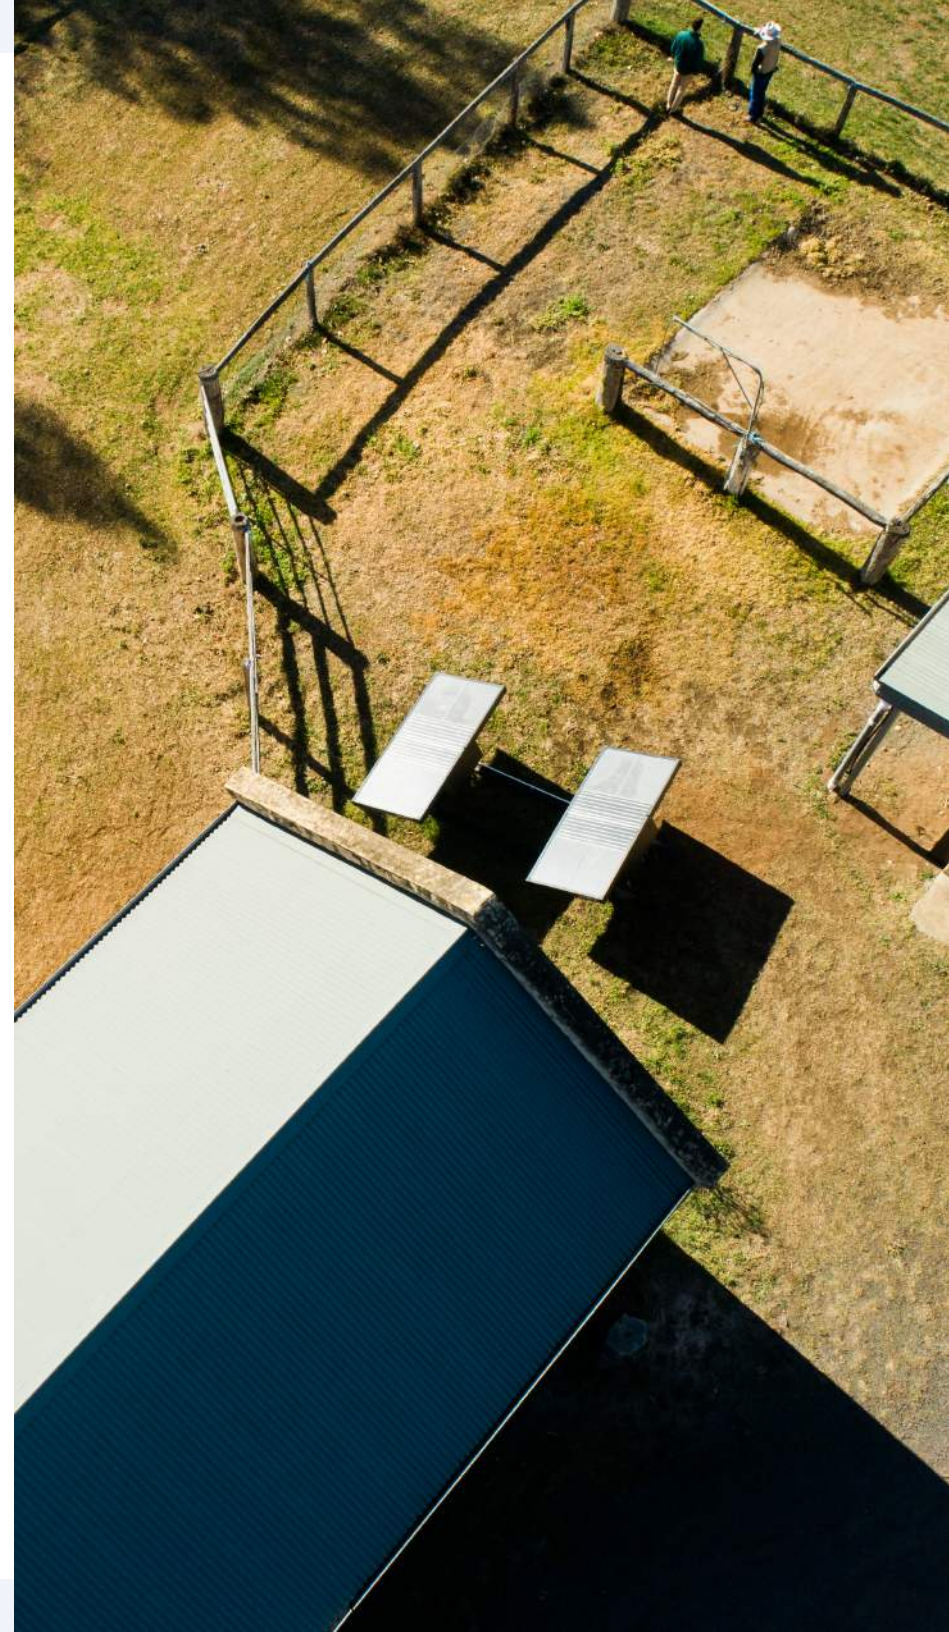

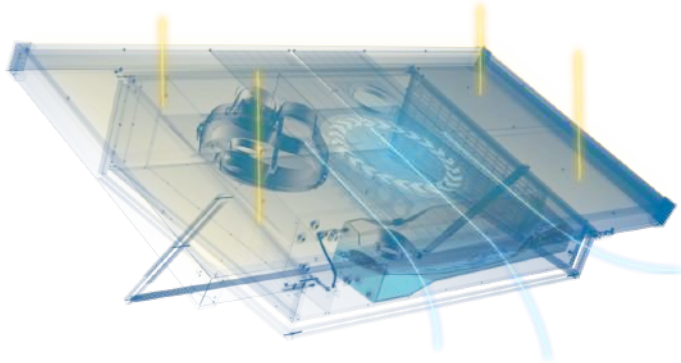

Your water is resilient and renewable so it requires no electric connection and is plastic-free.

How does SOURCE work?

- 1** Using solar PV, SOURCE takes in ambient air via fans & collects water vapor from that air onto a hygroscopic material
- 2** With heat from the sun, SOURCE converts water vapor collected into liquid water, made pure
- 3** The pure water flows into the 30-liter reservoir where it is mineralized with magnesium & calcium
- 4** Sensors inside the reservoir monitor & optimize the water to maintain quality

How much water does SOURCE make?

A standard 2-Hydropanel array produces **8–20** water bottles or **4–10** liters of water each day.

That's **240–600** standard water bottles* per month!

* Standard 16.9 oz. (500 mL) bottles

2 HYDROPANELS	240–600 BOTTLES EACH MONTH	4–5 PEOPLE
		

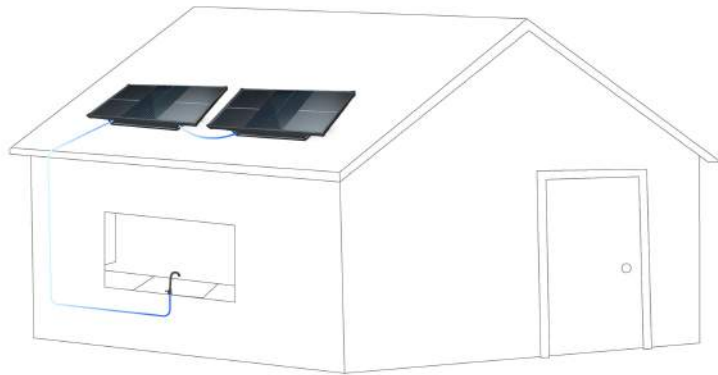

"I prefer to have SOURCE water at our work environment because it's more health conscious compared to the other suppliers we used to have. Compared to the previous system, it's way more environmentally friendly and we don't have heaps of plastic waste. It's good to know that the water we are drinking comes from the Hydropanels on our roof. I think it's pretty cool that with this technology, water can be made anywhere." – Maya, Queensland

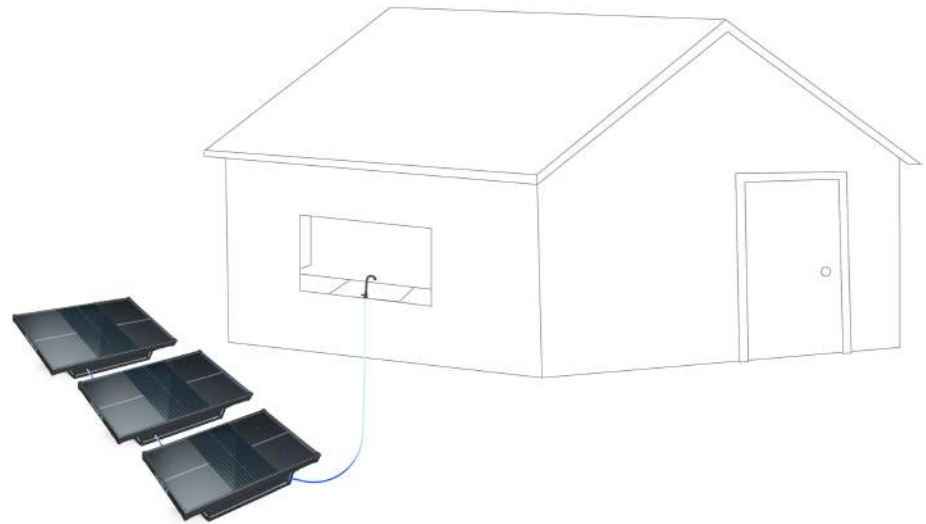

Perfect water from roof to tap

Whether you live in an urban community or a remote location, SOURCE Hydropanels make, mineralize, and deliver high-quality drinking water to your tap. Starting from a standard 2-Hydropanel array, SOURCE scales to meet any drinking water need.

SOURCE is installed in 23 countries across 5 continents

From arid deserts to humid coastlines, SOURCE perfects water for every person, in every place.

"It's wonderful having the cleanest possible water always available at the push of a button, chilled from the fridge. Never having to worry about the cleanliness of the municipal supply, especially with kids, provides peace of mind. And, it's just so cool!"

- Gene, California

"This region in the north unfortunately has a high number of kidney and intestinal problems and having SOURCE to replace the polluted water is a great way of eradicating the problem."

- Kawthar, Lebanon

"SOURCE is definitely a step in the right direction. It just produces water that tastes the way water should taste: super refreshing and really clean. Certainly, against the tap water, there is a massive difference."

- Darren, New South Wales

As seen in...

This Old House

"This is a technology that caught my attention. The fact that you can get clean safe drinking water out of the air, self-contained, no infrastructure."

CBS

"Most people get their water from thousands of miles away, you get it from right there [the roof] into your house."

RACHAEL

"When I see stuff like this, it really makes me feel so happy that I'm alive to see it. It's amazing!"
